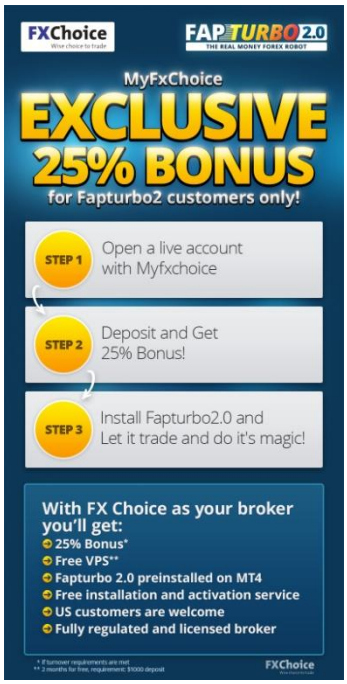
BTC FAPT2 PREMIUM

It's with great pride that we announce the release of our **BTC FAPT2 Premium** robot, specifically built and optimized for **BITCOIN**, the most popular crypto-currency to have hit the markets in recent years and is all set to become one of the fastest growing investment vehicles you have ever seen!

How to qualify for Premium Trading?



Our BTC FAPT2 version is optimized and fine tuned for our preferred brokers, **MyFxChoice** and **Tallinex**. To join our list of Premium members, you need to open and fund a live FapTurbo account with MyFxChoice here (with an equity of at least $500 or more): http://fapturbo2.com/myfxchoice

FxChoice is also offering a very attractive 25% bonus for our FapTurbo2.0 members only, plus free VPS (conditions apply). See the bonus offer on the right here.

Besides MyFxChoice, we have also joined hands to include **TALLINEX** as our second-best recommended broker for FAPTv2.0. We wanted to give our customers a little more choice for brokers with our latest FapTurbo v2.0 version. So, if you wish to try out our FAPTv2.0 on **Tallinex**, please be sure to sign up through this link here: http://fapturbo2.com/tallinex

Tallinex is also offering an excellent 100% bonus, once again for our FapTurbo2.0 members only. See their bonus offer here on the left.

FEATURES of the BITCOIN FAPT2 Robot

BTC FAPT2 shares many of the best features that we incorporated into FAPTv2.0 Premium. The difference is that BTC FAPT2 does not have the long-term FAP strategy (since the latter is meant to run on EURUSD only, not Bitcoin). However, BTC FAPT2 comes with both the Medium-Term strategy (MTS) as well as a Scalper mode, in which the latter's T/P and S/L are smaller than in the MTS, but the results are just as interesting. Our Bitcoin version has the same advantages found in FAPTv2.0 Premium. For a list of the features common to both Premium robots, please see the main FAPTv2.0 Premium guide.

- **MIXED TRADING MODES**: BTC FAPT2 Premium can be switched between the MTS and Scalper mode (UseMediumTermStrategy=false)

- **DIFFERENT T/P & S/L FOR EACH MODE**: The MTS mode in BTC FAPT2 has larger T/P and S/L naturally, in comparison to the Scalper mode, which also makes the former inherently more profitable. But you could always run both modes simultaneously on the same account for increased gains on BITCOIN. Please note that, irrespective of the broker, the T/Ps and S/Ls in BTC FAPT2 are represented in dollars, not pips. So, a T/P of 35 means $35 or 3500 pips (assuming 2 decimal points on BITCOIN's charts)

- **HIGHLY REDUCED DRAWDOWNS :** The trading requirements for Bitcoin are vastly different since BTC/USD has been leaping in prices over the past 2 years. Nevertheless, combining drawdowns from both modes (i.e., Scalper & MTS), the new BTC FAPT2 Premium did not exceed a drawdown of $1280 over a 3 year period from Jan 2011 onwards.

- **TIMEFRAME INDEPENDENT & VARIABLE TRADE TIMINGS:** This is self-explanatory.

- **FORCED CLOSURE OF TRADES AT END OF SESSION:** One of the more interesting features we've added it our FAPTv2.0 robots is the ability to force the robot to close

trades on a pair by the End of Session (EOS), which could be either daily, weekly or monthly! This will be explained in detail when we expand on the new ForceCloseAtEOS parameter later in this guide.

- **BITCOIN SPREAD ADDED TO TAKE PROFIT:** This feature has been added to our breakthrough BTC FAPT2 robot that works specifically on Bitcoin (BTC/USD). Since Bitcoin's spreads are notoriously high very often, you have the option to add the current spread to the robot's T/P, so as to allow the robot to compensate for the loss of spreads from its profits.

NOTE: For some parameters, you will notice that the default value is -1. This value means that the robot will internally choose the best, optimum settings to be applied on Bitcoin.

What are the results?

The MTS mode in BTC FAPT2 Premium is obviously more profitable than the Scalper mode, however both can be traded simultaneously for best profits. Just like FAPTv2.0, BTC FAPT2 Premium is also timeframe independent, but it will run on BITCOIN or BTC/USD only, no other pair. With the MTS, you could run the robot on H1 timeframe or higher and M1 for scalper, but this is merely to make it easier for you to distinguish which modes are running on which charts. In any case, the BTC FAPT2 mode will also be mentioned by the robot on the charts.

For Bitcoin, we recommend starting with atleast $1000-$5000 to take full advantage of the blatant upsurge that its main trend has been riding on especially since the year 2013!

PERFORMANCE RESULTS

Pair	2010 to Nov'13					Max Spread
	Profit	Trades	Profit Factor	Exp Payoff	Drawdown	
BTCUSD Scalper	$ 1,981.51	98	1.77	20.22	$ 539.30	900
BTCUSD Medium-Term	$ 4,556.15	54	4.55	84.37	$ 739.99	1000

And here are the BTC FAPT2 equity graphs for you to compare performances between the two modes:

What is Bitcoin

Bitcoin is a revolutionary new concept — a digital currency of the new era, not relying on any bank or government, which started few years ago as an open source project on www.bitcoin.org. It was considered by many as just another creation of Internet geeks before it took the financial world by storm this year and was suddenly raised to the ranks of major world currencies. Bitcoin as a concept was invented by a person (or hacker group) nicknamed Satoshi Nakamoto in his/her paper "Bitcoin: A Peer-to-Peer Electronic Cash System", which was, of course, published electronically and is available on the bitcoin.org site for anyone who's interested.

The essence of the entire idea is, as Nakamoto says, "A purely peer-to-peer version of electronic cash would allow online payments to be sent directly from one party to another without going through a financial institution." He points out that since this system runs transaction irreversibly and not through any financial institution, the transaction cost is drastically reduced and trust in the system is improved.

Any two willing parties can perform transaction without any trusted third-party (the distributed network plays a role of the third party). The actual Bitcoin is a file containing the chain of digital signatures of all previous owners. This approach prevents double-spending of any particular coin and eliminates the need of the central system. Any new transaction is broadcasted to all the nodes (peers) and the nodes can check validity of the coin by verifying the previous transactions. This makes counterfeiting essentially impossible. By the way, you can also earn your Bitcoins the "hard way" by helping the system to verify secure transactions. This process is called "mining" and requires a lot of computational power, typically multicore GPU system. The algorithm is designed in such a way that mining becomes more and more complex and less and less profitable with the time. So, mining is not as easy as it used to be when the Bitcoin network first began.

Nowadays, you can use Bitcoin for almost everything: purchase music, software, hosting, video games, betting, auctions like eBay... You can even rent apartments and buy houses using Bitcoin! Nobody expected Bitcoin to gain this much traction, but it is taking over the world faster than you might think.

Since **Bitcoin** is a currency, you can use it in exactly the same way you use any other electronic money: you open a digital wallet that can be installed on your computer or on your mobile phone and you use this wallet to pay or receive money. This is as safe (or maybe even safer) than any other digital wallet, it uses cryptography with public and private keys and all the

nitty-gritty that guarantees security of all your electronic transactions; for example, for credit card payment or home banking.

The advantages of **Bitcoin** stem from the fact that your transactions do not pass through any central office, bank, etc. The transactions take place between two persons and involve the entire network to approve its validity. No banks mean that the cost of transaction is kept very low. On top of that, your account cannot be frozen, it will not depend on failing banks, bad credit history etc. Opening an account does not require any prerequisites. Just your email address is enough.

Moreover, you can trade your bitcoins exactly the same way you can trade euros or dollars and gain money on its rate fluctuations. With more services and brokers opening up to Bitcoin, you can now trade and exchange bitcoins against other currencies or to buy goods or services. This is almost identical to trading regular forex currency pairs, the only difference here. The only market that we focus on when trading Bitcoin is versus the US Dollar, that's BTC/USD. Here is an example of how the BITCOIN chart looks in FxChoice's metatrader (in Tallinex, you will see the pair listed as BTC/USD)

Our BTC FAPT2 robot has been designed to take full advantage of the rising trend in Bitcoin and besides that, it is not limited to going long on BTC/USD. Whenever required, there are times when our robot will go short in order to make gains from temporary dips, so in this way, the robot is advantageous over 'buy and hold' strategies, which is what you would do if you were a long-term speculator or trader on the Bitcoin market.

How to run BTC FAPT2 PREMIUM

The installation process for our BTC FAPT2 Premium is identical to that of FAPTv2.0 Premium. The main thing to remember is to first sign up at **MyFxChoice or Tallinex** (or both) through our links below, with a deposit of at least $500 or more:

http://fapturbo2.com/myfxchoice

http://fapturbo2.com/tallinex

Once you complete the registration process, you will be given instructions and the links to download the respective **Metatraders (MT4)** from FxChoice and Tallinex. After you've installed the metatrader, you will find our Premium robots listed under the Expert Advisors section in the Navigator window, in this case, you should be looking for BTC FapTurbo2 Premium.

Before moving on to the instructions provided in the next section, you must first ensure that you have registered your live FxChoice or Tallinex account# in the License Management page of your FapTurbo2 Members Area. This has been explained in detail in the main FAPTv2.0 guide, so please be sure to read and follow the instructions from there.

Essentially, you will need to login to the FAPT2 Members Area, go to the License Management page and type in your live account# into the relevant textbox, and finally, click Save to register your live account#. Once it has been activated, you can move on to the next chapter.

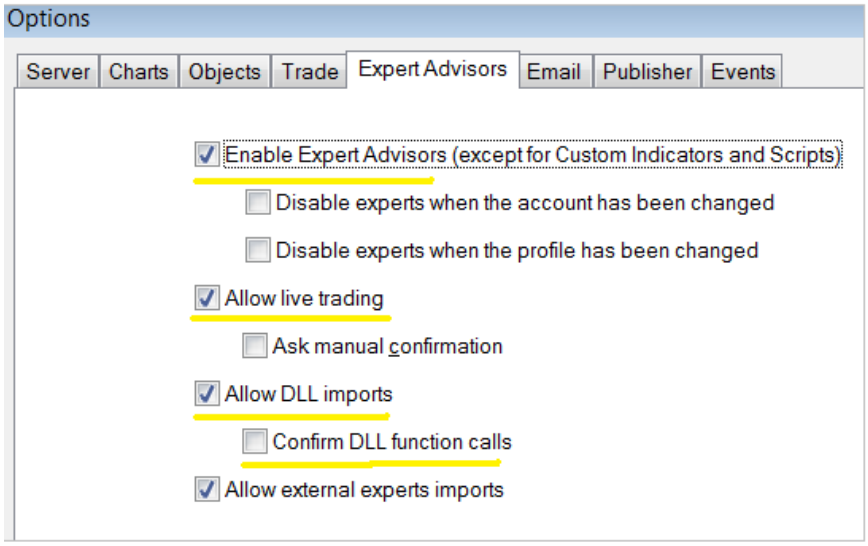
If you face any issues registering either of your live account#s, just email us (premium@fapturbo2.com) with your new account# and we'll update it for you.

Attaching BTC FAPT2 to the chart

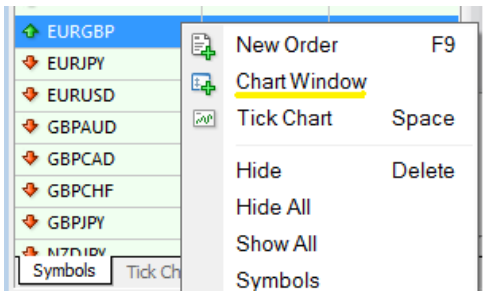
This process is similar to what has been described in our main FAPTv2.0 Premium, but we have included it here once again for your convenience. First of all, you should set the correct global settings in your Metatrader4 platform.

Click **Tools** in main menu - > **Options** - > **Expert Advisors** Tab

Make sure you have the same settings as shown on the screenshot below. **Enable Expert Advisors** checkbox must be checked**. Allow Live Trading** must be checked. **Allow DLL imports** must be checked too. Confirm DLL Function calls must be unchecked.



Then click OK to close the window. Now, make sure the «Expert Advisors» button on the top of Metatrader4 is ON, in the “pushed” position. When it is turned ON to allow Expert Advisor trading, it will have a green triangle showing, like this:



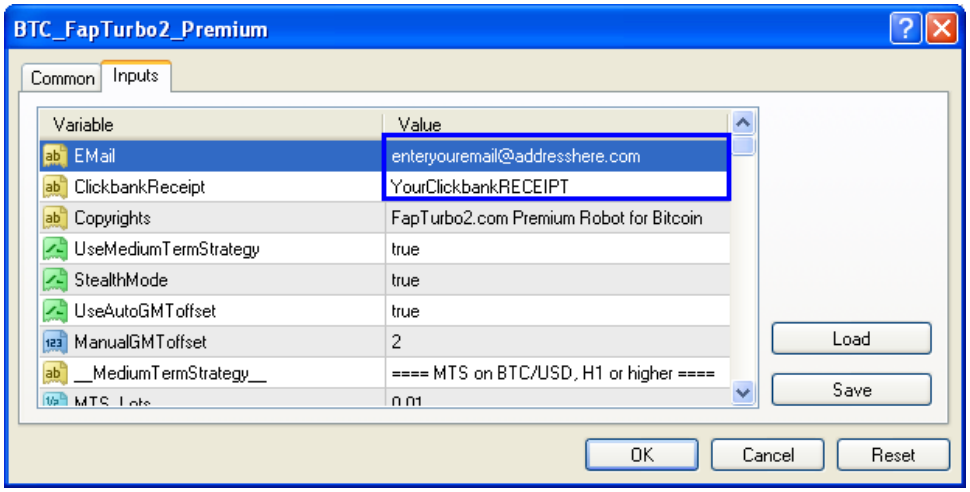
The next thing to do is to open a BITCOIN or BTC/USD chart. If you don’t see Bitcoin listed on the left within the Market Watch window, simply right-click and choose the option ‘Show All’. Once you do so, you’ll see BITCOIN listed and you can then open a chart by right-clicking on BITCOIN within Market Watch and then click **Chart Window** (as show on the right). Or you could simply click the **New Chart** button

on the metatrader toolbar and then choose BITCOIN from the list to open a new chart of the same.

Once that's done, if you wish, you can switch the timeframe (although it is not critical). For the default Medium-Term Strategy (MTS) mode, the timeframe of the Bitcoin chart may be set to H1 or higher, so that you can easily distinguish the MTS chart from the Scalper one. To switch timeframes, you can click your timeframe selection in the toolbar at the top of Metatrader4. If you are running the Scalper strategy (UseMediumTermStrategy=false), then it's best if you switch to M1 timeframe. On Tallinex, you can select BTC/USD, H1 or M1 respectively.

We now need to run BTC FAPT2 Premium on the relevant chart. You will have to first open a BITCOIN chart and then drag & drop the robot BTC_FapTurbo2_Premium onto the chart, like this:

The "**Settings**" Window will appear. Now it's time to authenticate your copy of BTC Premium EA. All you need to do is click the Inputs tab and enter your registered Email Address along with the correct Clickbank Receipt# of your FapTurbo2 purchase. You can find your CB receipt# in the email that Clickbank sent you as soon as you completed your purchase.



Then click "OK" to run the robot. If you set either robot correctly on the proper currency pair (timeframe is not critical for either mode), you will see a smiling face in the top right corner of the Chart window. This means that the Expert Advisor is working and monitoring the market.

Note: By default, the BTC FAPT2 robot runs on MTS mode. To enable the scalper in BTC FAPT2, the **UseMediumTermStrategy** parameter must be set to FALSE, otherwise the robot will assume the default mode of Medium-Term trading.

Medium-Term Strategy (MTS)

ACCOUNT INFORMATION:

Please keep in mind that you must be patient with BTC FAPT2 Premium robot especially when it is trading in MTS mode; it will not trade often but the aim is to make quality trades. The robot is always monitoring the market and opens its trades only when it sees conditions which indicate a high probability of success.

BTC FAPTURBO2 Premium will open trades when its internal indicators find the proper market conditions to open trades. The robots do not have to open many trades or trade every single day! The goal is to make a profit, not to make many trades!

If you followed the steps correctly but if the robot has not opened a single trade for the last 10 days, then you should contact our support team (premium@fapturbo2.com) for help and assistance.

Forex Brokers are closed on Saturdays and Sundays: Even the open Bitcoin market is active during weekends, no trades will be performed by our robots during the weekend. There is no need to turn off BTC FAPTURBO2 Premium during the weekend. It will sleep and continue to trade as soon as the broker is open again.

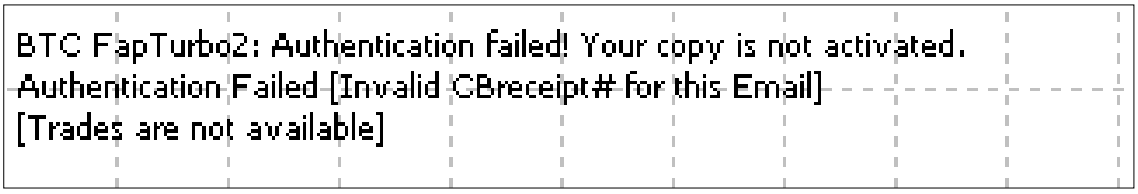
After you click OK, BTC FapTurbo2 will validate your Email and CB Receipt, and if it is a valid purchase, then you should see the successful Authentication results as shown in the previous screenshots:

Note: If you don't see the above 'successful Authentication' messages right away, that could mean one of several things:

- Check the parameter PrintLogOnChart (at the bottom of the parameters list) and make sure that it is set to True.
- Today is a non-trading day (weekend or Friday night, for example). Wait 2 days for this alert to appear. You cannot activate or run BTC FapTurbo2Premium during the weekend.
- You forgot to set the correct parameters, for example "Allow DLL imports" in EA settings. Check the previous steps carefully.

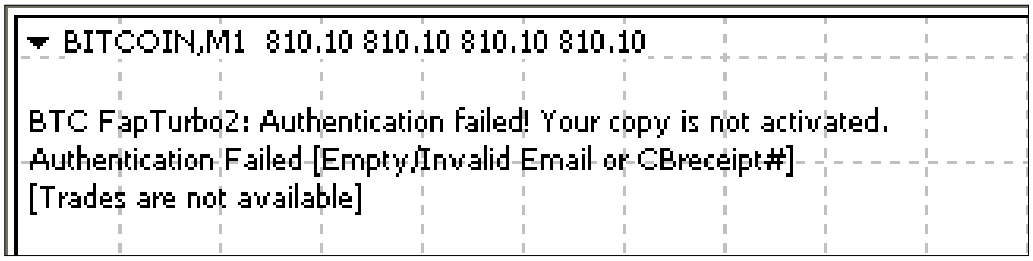
If the validation of your Email Address or Clickbank Receipt# fails, then you will see the error "**Authentication Failed [Wrong E-Mail or ClickbankReceipt]**" in the Experts/Journal tab as well as on the chart, like below. In such a case, please make sure that you've entered your Email Address and CB receipt correctly, without any typos or errors.

BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed [Incorrect Email]
[Trades are not available]



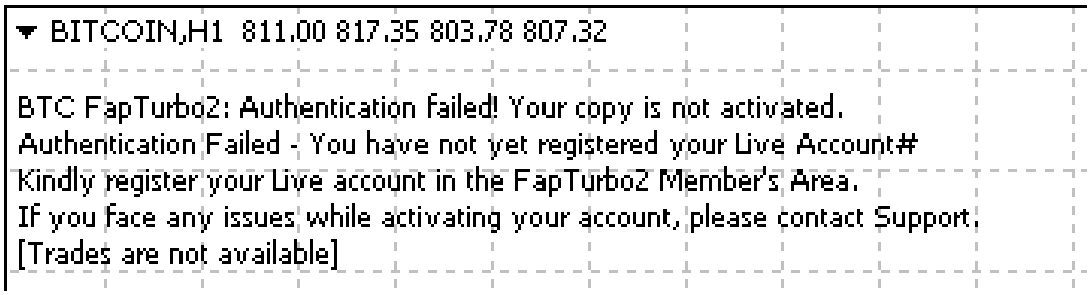
BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed [Invalid CBreceipt# for this Email]
[Trades are not available]

If you happen to completely forget to type in your Email Address or CB receipt#, then you will see this message instead:



BITCOIN,M1 810.10 810.10 810.10 810.10
BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed [Empty/Invalid Email or CBreceipt#]
[Trades are not available]

If you're running FapTurbo2 on your Live account for the first time, then you must register your Live account# in the Member's Area so that it will be activated for BTC FapTurbo2, otherwise you will receive the error below:



BITCOIN,H1 811.00 817.35 803.78 807.32
BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed - You have not yet registered your Live Account#
Kindly register your Live account in the FapTurbo2 Member's Area.
If you face any issues while activating your account, please contact Support.
[Trades are not available]

In order to register your Live account, please login to your FapTurbo2 Member's Area, click Downloads and scroll down until you find the FapTurbo2 activation section below. Clicking Edit will take you to the License Management page where you can register and activate your Live accounts as described in Step #3.

If you face any issues while attempting to register your Live account, please feel free to contact our Support department here: premium@fapturbo2.com

BTC FAPT2 PARAMETERS

MEDIUM-TERM STRATEGY SETTINGS

As mentioned earlier, the robot runs on Medium-term Strategy by default (UseScalperStrategy = TRUE). Many of the important parameters are similar to the ones in our main FAPTv2.0 Premium version. You can read about all the parameters from the main FAPTv2.0 guide. But for now, here's a quick summary of the important MTS settings in BTC FapTurbo2 Premium:

- **MTS_ForceCloseAtEOS** – This is the newest parameter we've added to BTC and FAPTv2.0 Premium. You can set this parameter in such a way that it will force the robot to close trades on the pair by the End of Session, which is defined as either Daily (1), Weekly (2) or Monthly (3). If you set it to 0, the robot will allow trades to exist for as long as possible without being forced to close. But if, for example, you set ForceCloseAtEOS to 1, then the robot will force any existing pair on the pair to close by the end of the day's session for that specific pair (which is defined by MTS_EndWorkTimeHour and MTS_EndSessionMinute). If set to 2, the robot will force trades to close by the End of Week (i.e., 5 mins before the end of trading on Friday every week). We have found weekly closure to be profitable across most pairs, including Bitcoin! And if you set ForceCloseAtEOS to 3, then all trades on a pair will be closed at the beginning of each month (first trading day of each month). You can test this parameter for yourself, if you'd like to play around with it. But if you ever get confused, just leave it at its default value of -1.
- MTS_ReverseTrade – By default, the strategy usually trades in a counter-trend style. By setting this parameter to 1, then FapTurbo2 will open a trade opposite to its normal signal and you can force the robot to trade along the direction of the current trend, which seems to suit certain pairs better. Strongly unrecommended for beginners.

TRADE T/P and S/L : This set of parameters is self-explanatory. Each mode has been set with its own optimized Take Profit and Stop Loss values, and are named accordingly, for e.g., MTS_ TakeProfit/StopLoss and Scalper_ TakeProfit/StopLoss.

Please remember that, irrespective of the broker, the T/Ps and S/Ls in BTC FAPT2 are represented in dollars, not pips. So, a T/P of 35 means $35 or 3500 pips (assuming 2 decimal points on BITCOIN's charts)

MTS & Scalper_AddSpreadToTP : This is another new parameter we added especially for BTC FAPT2 Premium. As explained earlier, the instantaneous spreads on the BITCOIN (BTC/USD) markets can be quite high very often, and they also fluctuate wildly, especially during periods of high volatility. This is quite normal of the Bitcoin markets and is expected across any broker that offers Bitcoin for trading. Incase the current spread is within the MaxSpread range, the BTC FAPT2 robot will allow trades. However, you may find that a great chunk of the robot's profitable trades are negated by the high spreads at the moment at which those trades were opened. So, in order to compensate for such spread losses, we added this feature. By setting **AddSpreadToTP** to True, the robot will remember the spread at the time at the trade was opened and will compensate for it by adding that spread to the T/P for that mode.

OTHERS / MISCELLANEOUS

- **MaxSpread** - You can define the maximum spread at which you would like BTC FAPTURBO2 to trade. For BITCOIN, it's advantageous to stay within a MaxSpread of $1 (that's 100 pips on BITCOIN). However, if you wish to experiment with this setting, then you could increase it further for the Medium-Term Strategy, but it is not recommended to do so for the Scalper mode.

SCALPER STRATEGY

To activate Scalper Strategy you should set **UseMediumTermStrategy = FALSE** parameter in BTC FAPTURBO2's settings. Everything else with this mode is similar to the parameters in the MTS mode, so they will not be explained further here. For a detailed explanation of each parameter, please be sure to read the main FAPTv2.0 Premium manual once again.

IMPORTANT POINTS TO REMEMBER

1. BITCOIN or BTC/USD is a market where you can trade the virtual crypto-currency Bitcoin versus the US Dollar. The fundamentals that drive this pair are different from what you may be used to seeing with other regular forex pairs, but technical analysis may be applied to it like on a regular pair.

2. The Bitcoin pair is on an overall uptrend at the moment and has been increasing in value by leaps and bounds ever since the beginning of 2013.

3. You might find that the BITCOIN market is generally open to trading even during weekends, but when it comes to regular forex brokers, no trading is allowed over weekends. This is a limitation by the brokers; hence, our BTC FAPT2 Premium will not trade on BITCOIN or BTC/USD during the weekends.

4. Very often, you will see that the Spreads on Bitcoin can be very high, but this is well-taken care of by our robot with the MaxSpread and AddSpreadToTP parameters.

5. Please remember that, irrespective of the broker, parameters that are related to price in BTC FAPT2 such as T/Ps , S/Ls, MaxSpread and Slippage are represented in dollars, not pips. As you will see on FxChoice and Tallinex, Bitcoin prices are expressed in 2 decimal digit values. Therefore, a movement of $1.00 is equivalent to 100 pips.
